

# Oracle® Retail Clearance Optimization Engine

Release Notes

Release 13.3.1

June 2012

---

Oracle Retail Clearance Optimization Engine (COE) Release 13.3.1 is a patch release for COE 13.3. COE 13.3.1 includes selected defect fixes for COE 13.3 code.

Oracle Customer Support investigates submitted issues assuming that all released updates have been applied. It is the customer's decision when to apply a new release; however, delays in applying updates can complicate the support process.

## About Patch Releases

Oracle Retail patch releases are periodic releases that can include the following:

- New defect fixes and technical enhancements.

Documentation for patch releases includes the following:

- New and updated guides (for example, operations and user guides) that apply to the patch release level. These documents include all updates made since the last patch release. Documents revised for this patch release supersede and replace all previous document versions. See "[Related Documents](#)" for a list of the documents published for COE 13.3.1.

See the *Oracle Retail Clearance Optimization Engine Installation Guide* for Release 13.3.1 for instructions about how to apply the defect fixes and enhancements that you have not already applied.

## Hardware and Software Requirements

See the *Oracle Retail Clearance Optimization Engine Installation Guide* for information about the following:

- Hardware and software requirements.
- Oracle Retail application software compatibility.

## Upgrading to this Release of Clearance Optimization Engine

For more information on upgrading to COE Release 13.3.1, see the *Oracle Retail Clearance Optimization Engine Installation Guide*.

## Build IDs

**Table 1** *Package Matrix Build IDs*

Component Name	Version Number
COE 13.3.1	RGBUMDOCOE_13.3.1.0_GENERIC_120601.1807
Framework 3.5.1	RGBUMPOFRAMEWORK_3.5.1.0_GENERIC_120601.1157
Installer 3.5.1	RGBUMPOINSTALLER_3.5.1.0_GENERIC_120601.1556
Suite 3.5.1	RGBUMPOSUITE_3.5.1.0_GENERIC_120601.1536
Enginepkg 5.6.5	RGBUMPOCALCENGINEPKG_5.6.5.0_GENERIC_120601.0033
APC-MDO 13.3.0	RGBUAPCMDO_13.3.0.0_GENERIC_111216.0132

## Technical Enhancements

The following are technical enhancements for Oracle Retail Clearance Optimization Engine Release 13.3.1.

### Software Operating Environment Upgrades

The following are enhancements to the software operating environment options for COE 13.3.1:

- Oracle JRockit R28 (Java 6)  
COE Release 13.3.1 is supported for use with the Oracle JRockit R28 implementation of Java 6 for Oracle Linux 64-bit and Oracle Solaris 64-bit operating systems.
- Oracle Enterprise Linux 5 update 8  
COE now supports the use of Oracle Enterprise Linux 5 update 8 operating system.

## Noteworthy Defect Fixes

The following noteworthy defects have been fixed in this release:

Defect	Description
13709066	There were issues with Reference price when the GenuineBayesian base demand estimation was used. These issues are fixed.
13735921	The issues with blacklisted string filtering in sql statements are fixed.
13928627	The message strings, for Standard Configuration, are modified to meet standards and recommendations set by the Oracle Worldwide Product Translation Group.
14029647	The message strings, for Common Components, are modified to meet standards and recommendations set by the Oracle Worldwide Product Translation Group.
14029651	The message strings, for Cacl Engine, are modified to meet standards and recommendations set by the Oracle Worldwide Product Translation Group.

## Known Issue

COE web service can be enabled with Security (digital signatures and encryption). It uses WebLogic WS-Policy files for enabling message-level security.

Due to a defect 14098718 in WebLogic 10.3.5, the WebLogic console page that allows the user to associate WS-Policy files to a web service is broken if the Oracle Web service Security Manager (OWSM) is not installed in the Middleware home. OWSM is part of SOA Suite and is not required for the COE application. COE Web service only uses WebLogic WS-Security.

The following section describes the workaround to associate the WS-Policy files to COE web service security.

---

---

**Note:** The user must still follow the *COE Installation Guide* and WebLogic documentation to complete the rest of the steps for enabling security for COE web service including:

- Enabling and configuring WebLogic Security providers
  - Authentication provider
  - Mapping credential
- 
- 

## Workaround to Associate a WS-Policy file with COE Web Service

This workaround is to associate a deployment plan for the COE application, Price, that defines what policy files to associate with the COE web service operations.

This deployment plan (plan.xml) associates:

- WS-Policy Encrypt.xml and Sign.xml to the COE web service ClearanceOptimizationServiceSoapHttpPort for both Inbound and Outbound.
- WS-Policy Auth.xml to the COE web service ClearanceOptimizationServiceSoapHttpPort for Inbound messages for both getForecast and getVersion operations.

---

---

**Note:** The COE application must be already installed.

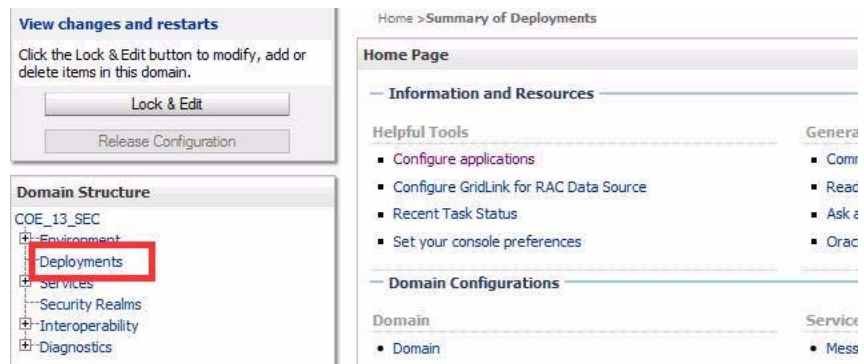

---

---

The instructions to apply this workaround are below.

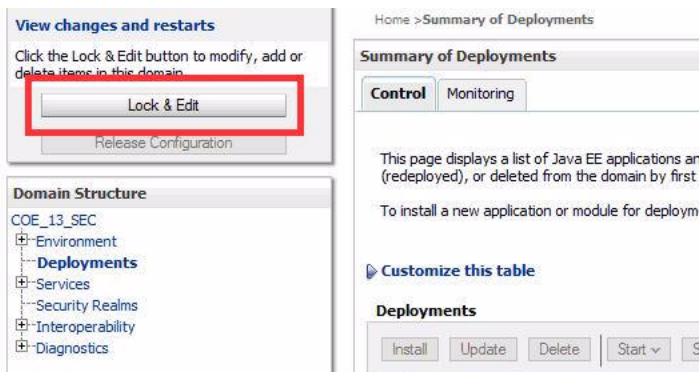

1. Create a new XML file. See [Sample XML text](#) for the contents of the XML file.
2. Save the XML file to the location where the WebLogic server is installed for COE, on the Server.
3. Log into the WebLogic admin console.
4. On the Summary of Deployments screen, click **Deployments** in the Domain Structure section.

**Figure 1 Summary of Deployments > Domain Structure > Deployments**

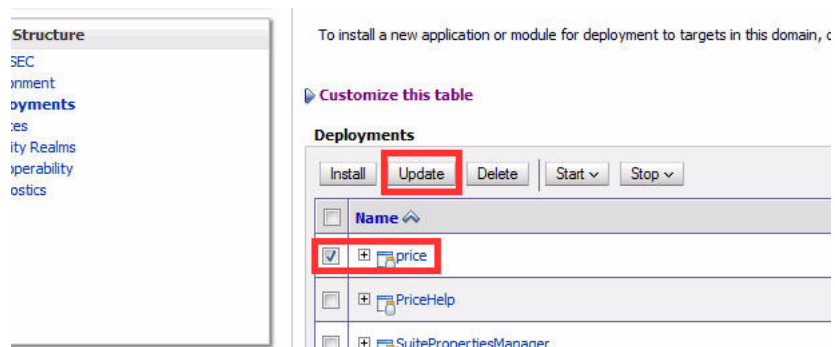

5. Under View changes and restarts, click **Lock & Edit** to modify the domain.

**Figure 2 Summary of Deployments > View changes and restarts > Lock & Edit**

6. In the Deployments section, select the check box for the deployment "price", and click **Update**.

**Figure 3 Summary of Deployments > Customize this table**

7. In the Update Application Assistant section, click **Change Path** in the Deployment plan path section.

**Figure 4 Summary of Deployments > Update Application Assistant**

The screenshot shows the 'Update Application Assistant' dialog box. On the left is a sidebar with a tree view containing 'Main Structure' and sub-items: '\_13\_SEC', 'Environment', 'Deployments', 'Services', 'Security Realms', and 'Interoperability'. The main area has a title bar 'Home > Summary of Deployments' and a header 'Update Application Assistant'. Below the header are buttons: 'Back', 'Next', 'Finish', and 'Cancel'. The section 'Locate new deployment files' contains the text 'You have elected to update the price application.' Below this, 'Source path:' is set to '/u00/qaprice/stephan/COE\_13\_SEC/linux,'. 'Deployment plan path:' is set to '(No value specified)' with a 'Change Path' button highlighted by a red rectangle. At the bottom are 'Back', 'Next', 'Finish', and 'Cancel' buttons.

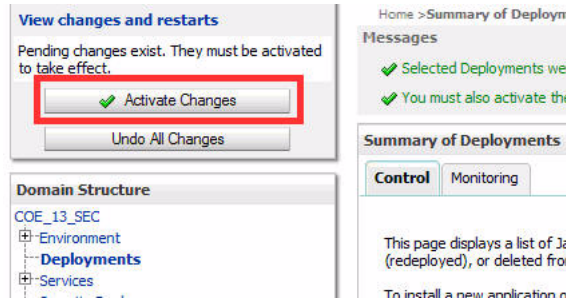

8. Navigate to the location where the XML file has been saved. Refer to step 2 for the location.
9. Select the XML file, and click **Next**.
10. In the Locate new deployment files section, select "Update this application in place with new deployment plan changes." radio button, and click **Finish**.

**Figure 5 Summary of Deployments > Update Application Assistant**

The screenshot shows the 'Update Application Assistant' dialog box at a later stage. The 'Locate new deployment files' section now has two radio button options. The first option, 'Update this application in place with new deployment plan changes. (A deployment plan must be specified for this option)', is selected and highlighted with a red rectangle. Below it, 'Deployment plan path:' is set to '/u00/qaprice/stephan/COE\_13\_SEC/linux/modules/Price/Plan.xml' with a 'Change Path' button. The second option, 'Redeploy this application using the following deployment files:', is unselected. Below it, 'Source path:' is set to '/u00/qaprice/stephan/COE\_13\_SEC/linux/modules/Price/p4pgui.ear' with a 'Change Path' button, and 'Deployment plan path:' is set to '/u00/qaprice/stephan/COE\_13\_SEC/linux/modules/Price/Plan.xml' with a 'Change Path' button. At the bottom, the 'Finish' button is highlighted with a red rectangle.

11. In the View changes and restarts section, click **Activate Changes** to release the domain from Lock & Edit mode. Restart the server, if needed.

**Figure 6 Summary of Deployments > Activate Changes**

## Related Documents

For more information, see the following documents in the Oracle Retail Clearance Optimization Engine Release 13.3.1 documentation set:

- *Oracle Retail Clearance Optimization Engine Installation Guide.*

## Documentation Accessibility

Our goal is to make Oracle products, services, and supporting documentation accessible to all users, including users that are disabled. To that end, our documentation includes features that make information available to users of assistive technology. This documentation is available in HTML format, and contains markup to facilitate access by the disabled community. Accessibility standards will continue to evolve over time, and Oracle is actively engaged with other market-leading technology vendors to address technical obstacles so that our documentation can be accessible to all of our customers. For more information, visit the Oracle Accessibility Program Web site at <http://www.oracle.com/accessibility/>.

### Accessibility of Code Examples in Documentation

Screen readers may not always correctly read the code examples in this document. The conventions for writing code require that closing braces should appear on an otherwise empty line; however, some screen readers may not always read a line of text that consists solely of a bracket or brace.

### Accessibility of Links to External Web Sites in Documentation

This documentation may contain links to Web sites of other companies or organizations that Oracle does not own or control. Oracle neither evaluates nor makes any representations regarding the accessibility of these Web sites.

### Access to Oracle Support

Oracle customers have access to electronic support through My Oracle Support. For information, visit <http://www.oracle.com/support/contact.html> or visit <http://www.oracle.com/accessibility/support.html> if you are hearing impaired.

#### **Value-Added Reseller (VAR) Language**

##### **Oracle Retail VAR Applications**

The following restrictions and provisions only apply to the programs referred to in this section and licensed to you. You acknowledge that the programs may contain third party software (VAR applications) licensed to Oracle. Depending upon your product and its version number, the VAR applications may include:

- (i) the **MicroStrategy** Components developed and licensed by MicroStrategy Services Corporation (MicroStrategy) of McLean, Virginia to Oracle and imbedded in the MicroStrategy for Oracle Retail Data Warehouse and MicroStrategy for Oracle Retail Planning & Optimization applications.
- (ii) the **Wavelink** component developed and licensed by Wavelink Corporation (Wavelink) of Kirkland, Washington, to Oracle and imbedded in Oracle Retail Mobile Store Inventory Management.
- (iii) the software component known as **Access Via™** licensed by Access Via of Seattle, Washington, and imbedded in Oracle Retail Signs and Oracle Retail Labels and Tags.
- (iv) the software component known as **Adobe Flex™** licensed by Adobe Systems Incorporated of San Jose, California, and imbedded in Oracle Retail Promotion Planning & Optimization application.

You acknowledge and confirm that Oracle grants you use of only the object code of the VAR Applications. Oracle will not deliver source code to the VAR Applications to you. Notwithstanding any other term or condition of the agreement and this ordering document, you shall not cause or permit alteration of any VAR Applications. For purposes of this section, "alteration" refers to all alterations, translations, upgrades, enhancements, customizations or modifications of all or any portion of the VAR Applications including all reconfigurations, reassembly or reverse assembly, re-engineering or reverse engineering and recompilations or reverse compilations of the VAR Applications or any derivatives of the VAR Applications. You acknowledge that it shall be a breach of the agreement to utilize the relationship, and/or confidential information of the VAR Applications for purposes of competitive discovery.

The VAR Applications contain trade secrets of Oracle and Oracle's licensors and Customer shall not attempt, cause, or permit the alteration, decompilation, reverse engineering, disassembly or other reduction of the VAR Applications to a human perceivable form. Oracle reserves the right to replace, with functional equivalent software, any of the VAR Applications in future releases of the applicable program.
