

# Oracle® Retail Clearance Optimization Engine

Release Notes

Release 13.0.3

February 2009

---

This document contains the release notes for Clearance Optimization Engine (COE) v13.0.3.

## COE v13.0.3 Build IDs:

**Table 1** *Package Matrix Build IDs*

Component Name	Version Number
COE 13.0.3	Coe-13.0.3-33-200901230600-233044
Enginepkg 5.3.3	Enginepkg-5.3.3-188-200901222300-233040
Framework 1.7.4	Framework-1.7.4-320-200901162100-232718
Suite 1.7.4	Suite-1.7.4-317-200901162130-232718
Installer 2.3.4	Installer-2.3.4-312-200901162200-232718
APC 13.0.3	APC-13.0.3-108-200901230300-233044

## Note the Following

COE v13.0.3 includes the following new features.

**Web Service Versioning** – The name of the What If Web Service (V0) has been changed to Clearance Optimization Service (V1). The What If web service is being co-hosted with the Clearance Optimization web service for backward compatibility. Here are the details of the web service changes:

### V0 Web Service

- Service Name: WhatIf Service V0
- Service URL: `http://<host>:<port>/mdowif/wifservice`
- WSDL URL: `http://<host>:<port>/mdowif/wifservice?wsdl`

### V1 Web Service

- Service Name: Clearance Optimization Service V1
- Service URL: `http://<host>:<port>/clearance/optimization/V1/ClearanceOptimizationService`
- WSDL URL: `http://<host>:<port>/clearance/optimization/V1/ClearanceOptimizationService?wsdl`

**WebLogic Support** – COE v13.0.3 supports WebLogic v10.0 mp1.

**MDO Governor** – The MDO Governor functionality can be used to rate markdown recommendations as "Reliable", "Unreliable" or "Not applicable". In

this release, the following enhancements/bug fixes has been made to the MDO Governor functionality.

**Configurable States:** The number of states used to compute the risk rating can be configured using the new parameter 'TARGET\_COUNT' in IR\_ITEM\_PARAMETERS view.

The MDO Governor State Transition machine previously rated markdown recommendations as reliable one state prior to the desired state. This behavior has been fixed with this release (TT 26373).

## Impact of Bug Fix on COE

The following table shows the TestTrack issues that were fixed in COE v13.0.3 and that impact either the inference rules, load statements, schema, Standard Load, or Calc Engine. (Note that some issues do not fall into any of these categories.)

TT#	Inference Rules	Load Statements	Schema Change	Standard Load	Calc Engine
27244		X			

## Bug Descriptions

The following is a list of the TestTrack issues that have been addressed in COE v13.0.3.

**26373** – The MDO Governor State Transition machine previously rated markdown recommendations as reliable one state prior to the desired state. This behavior has been fixed with this release.

**26612** – In Business Rule Manager, the incorrect child nodes are returned when a rule with attributes is modified.

**26794** – The version name of the WhatIf Service should be generic since it is common to both MDO and COE

**26918** – The XSD has been modified so that the RPAS Item Planning application can now send the NULL or not tag for any scenario variable. The value of -1 is no longer required.

**26951** – The online help for COE Checking for Browser Settings heading displays MDO.

**27018** – The COE dataset sample baseline report has been updated.

**27134** – The COE installation fails intermittently during a UserManagement deployment.

**27244** – The mdo.rpas.sendback.sh file, which generates the sendback files, now specifies the correct option for the WebLogic server.

## Known Issues

The following are the known issues with this release.

**27008** – The default degree of parallelism has been set to twice the number of CPUs for use by the standard load procedure. This increases the TEMP tablespace and improves performance.

**27189** – Stopping applications before running the Installer in upgrade mode:

1. When you start the upgrade, the installation replaces the existing applications (deployed over the OC4J instance) with the new ones. During this operation, the OC4J instance may run out of physical memory space and generate an Out of Memory (PermGen space) exception. Once this exception occurs, the instance will no longer be available for use and a server restart will be necessary to continue operations. This has been identified as a known issue with Oracle Application Server 10g (**MetaLink Note 368342.1**).

To avoid an Out of Memory exception during the upgrade, you must first complete the following steps:

- a. Navigate to the following location in the Oracle Application Server Home directory:

```
<OAS_HOME>/opmn/conf/
```

- b. Edit the **opmn.xml** and ensure that it includes the following values within the **category id** tag (in the **ias-component id** section):

```
-Djava.awt.headless=true -Xmx512m -Xms256m -XX:MaxPermSize=256m
```

---

**Note:** The **-Xmx512m**, **-Xms256m**, and **-XX:MaxPermSize=256m** memory arguments are recommendations for a typical configuration. You can choose to set up a different memory argument that best fits your hardware configuration.

---

- c. Log on to the Enterprise Manager for the application server by typing the following address in a Web browser:

```
http://mycompany.domain.com:<admin-port>/em
```

Once logged on, the **Cluster Topology** page appears.

- d. On the **Cluster Topology** page, under the **Members** section, select the check box next to the following application components:

- **BRMHelp**
- **BusinessRuleMgr**
- **c4p**
- **price**
- **PriceHelp**
- **SuitePropertiesManager**
- **SystemInformationTool**
- **UMHelp**

- e. Click **Stop**. The **Confirmation** page appears.
- f. On the **Confirmation** page, review the components selected, and click **Yes**.
- g. Restart the application server.

**27260** – The Web Service response XML on WebLogic displays both the date and time. OAS does not display the date and time. This is the expected behavior.

**27414** – With WebLogic 10.0 mp1 on AIX, when the web service is invoked, the following exception appears in the log file:

```
java.lang.IllegalArgumentException: Provider  
org.apache.xerces.jaxp.validation.XMLSchemaFactory not found.
```

This error is benign and does not affect the application functionality.

---

Copyright © 2009 Oracle. All rights reserved.

The Programs (which include both the software and documentation) contain proprietary information; they are provided under a license agreement containing restrictions on use and disclosure and are also protected by copyright, patent, and other intellectual and industrial property laws. Reverse engineering, disassembly, or decompilation of the Programs, except to the extent required to obtain interoperability with other independently created software or as specified by law, is prohibited.

The information contained in this document is subject to change without notice. If you find any problems in the documentation, please report them to us in writing. This document is not warranted to be error-free. Except as may be expressly permitted in your license agreement for these Programs, no part of these Programs may be reproduced or transmitted in any form or by any means, electronic or mechanical, for any purpose.

If the Programs are delivered to the United States Government or anyone licensing or using the Programs on behalf of the United States Government, the following notice is applicable:

U.S. GOVERNMENT RIGHTS Programs, software, databases, and related documentation and technical data delivered to U.S. Government customers are "commercial computer software" or "commercial technical data" pursuant to the applicable Federal Acquisition Regulation and agency-specific supplemental regulations. As such, use, duplication, disclosure, modification, and adaptation of the Programs, including documentation and technical data, shall be subject to the licensing restrictions set forth in the applicable Oracle license agreement, and, to the extent applicable, the additional rights set forth in FAR 52.227-19, Commercial Computer Software--Restricted Rights (June 1987). Oracle USA, Inc., 500 Oracle Parkway, Redwood City, CA 94065.

The Programs are not intended for use in any nuclear, aviation, mass transit, medical, or other inherently dangerous applications. It shall be the licensee's responsibility to take all appropriate fail-safe, backup, redundancy and other measures to ensure the safe use of such applications if the Programs are used for such purposes, and we disclaim liability for any damages caused by such use of the Programs.

Oracle, JD Edwards, PeopleSoft, and Siebel are registered trademarks of Oracle Corporation and/or its affiliates. Other names may be trademarks of their respective owners.

The Programs may provide links to Web sites and access to content, products, and services from third parties. Oracle is not responsible for the availability of, or any content provided on, third-party Web sites. You bear all risks associated with the use of such content. If you choose to purchase any products or services from a third party, the relationship is directly between you and the third party. Oracle is not responsible for: (a) the quality of third-party products or services; or (b) fulfilling any of the terms of the agreement with the third party, including delivery of products or services and warranty obligations related to purchased products or services. Oracle is not responsible for any loss or damage of any sort that you may incur from dealing with any third party.

#### Value-Added Reseller (VAR) Language

##### Oracle Retail VAR Applications

The following restrictions and provisions only apply to the programs referred to in this section and licensed to you. You acknowledge that the programs may contain third party software (VAR applications) licensed to Oracle. Depending upon your product and its version number, the VAR applications may include:

(i) the software component known as **ACUMATE** developed and licensed by Lucent Technologies Inc. of Murray Hill, New Jersey, to Oracle and imbedded in the Oracle Retail Predictive Application Server - Enterprise Engine, Oracle Retail Category Management, Oracle Retail Item Planning, Oracle Retail Merchandise Financial Planning, Oracle Retail Advanced Inventory Planning and Oracle Retail Demand Forecasting applications.

(ii) the **MicroStrategy** Components developed and licensed by MicroStrategy Services Corporation (MicroStrategy) of McLean, Virginia to Oracle and imbedded in the MicroStrategy for Oracle Retail Data Warehouse and MicroStrategy for Oracle Retail Planning & Optimization applications.

(iii) the **SeeBeyond** component developed and licensed by Sun Microsystems, Inc. (Sun) of Santa Clara, California, to Oracle and imbedded in the Oracle Retail Integration Bus application.

(iv) the **Wavelink** component developed and licensed by Wavelink Corporation (Wavelink) of Kirkland, Washington, to Oracle and imbedded in Oracle Retail Store Inventory Management.

(v) the software component known as **Crystal Enterprise Professional and/or Crystal Reports Professional** licensed by Business Objects Software Limited ("Business Objects") and imbedded in Oracle Retail Store Inventory Management.

(vi) the software component known as **Access Via™** licensed by Access Via of Seattle, Washington, and imbedded in Oracle Retail Signs and Oracle Retail Labels and Tags.

(vii) the software component known as **Adobe Flex™** licensed by Adobe Systems Incorporated of San Jose, California, and imbedded in Oracle Retail Promotion Planning & Optimization application.

(viii) the software component known as **Style Report™** developed and licensed by InetSoft Technology Corp. of Piscataway, New Jersey, to Oracle and imbedded in the Oracle Retail Value Chain Collaboration application.

(ix) the software component known as **DataBeacon™** developed and licensed by Cognos Incorporated of Ottawa, Ontario, Canada, to Oracle and imbedded in the Oracle Retail Value Chain Collaboration application.
