

Oracle® Retail Analytic Parameter Calculator

Release Notes

Release 13.0.2

December 2008

This document contains the release notes for the Analytic Parameter Calculator (APC) 13.0.2.

APC 13.0.2 Build IDs:

Table 1 *Package Matrix Build IDs*

Component Name	Version Number
APC 13.0.2	APC-13.0.2-82-200812090300-230823
Installer 2.3.0	Installer-2.3.0-181-200804142200-219038
MDO 13.0.2	Price-13.0.2-680-200812011946-230397
COE 13.0.2	Coe-13.0.2-47-200812011743-230397

About APC

The Analytic Parameter Calculator (APC) provides an end-to-end product solution to successfully configure and use the analytic products that rely on the causal forecasting methodology. It uses the latest in retail science to calculate elasticities and seasonality curves. The APC will be used on-site by third parties or by Oracle Retail Consulting.

The APC 13.0.2 release supports the MDO application.

Science Improvements

This release of APC also improves the handling of partitions that do not contain enough data to obtain reliable estimates of elasticity.

Note the Following

This version of APC does not support AIX.

The following procedure should be completed as part of the APC installation process when installing APC on OAS 10.1.3.3 (Linux only):

Complete the these steps to edit the following configuration parameter on the server:

1. Go to the Application Server... > OC4J: ... home > Server Properties page
2. Go to Command Line Options -> Start-parameters:Java Options
3. Add: -XX:CompileCommand=exclude,oracle/sql/NUMBER,toBytes

Bug Descriptions

The following bugs were fixed in APC 13.0.2:

26432 – Two new fields have been added to the Raw AP stage:

Range filter – used to eliminate unreliable data using start date and end date for the period. Both the start date and the end date are Null by default. A Null value means that the field is not used in the filter. One of the fields or both of the fields can have a value of Null. If both fields are Null, then the data is not filtered.

Eligible items threshold – the minimum number of items that a Merchandise Hierarchy/Location Hierarchy/Season Code partition must contain so that Raw-AP can produce a seasonality curve for the partition.

26484 – Custom Run is no longer an independent part of Tools. It has been combined with Stage Status.

26485 – The ability to upload and download xml files has been added to the APC application. See the description in the User Guide of the Load Config button in the Preprocessing stage.

26494 – The Process Train has been modified so that whatever stage is current is highlighted.

26503 – The `rawap.inventory.source` setting in the `apc.properties` file is used to set up APC so that it ignores inventory when determining elasticity.

This property can have one of three string values: `sku_store`, `inventory`, or `none`. The value `"sku_store"` means Raw-AP will use `sku-store` count as a replacement for inventory (this is for clients who have `sku-store` data but no inventory data). The value `"inventory"` means that the client historical data has reliable inventory data, and therefore Raw-AP should use this data. The value `"none"` means the client has neither `sku-store` count nor inventory data, and thus Raw-AP should ignore both when determining elasticity.

26678 – It is now required that the Output stage must be completed before the Parameter Export stage can be run.

26985 – The APC UI now uses the "Used" column in `asds_client_hierarchy_tbl` to determine which merchandise hierarchy and location hierarchy levels to display in the Raw AP stage display. The "Used" column is configurable. A value of N indicates the levels that are at or below the optimization level.

Known Issues

The following are the known issues with the release of APC 13.0.2.

26072 – For the Life cycle sell through % parameter in the Preprocessing stage, both the Start and End values must be ≥ 0 ; ≤ 50 . The start and end values should not both be 50, but the UI does not enforce this.

26818 – In the Raw AP stage, for the Range filter parameter, the UI does not enforce sufficient restrictions on the Start Date and End Date. These dates must both be between the start and end of historical data and must be at least 1 year apart.

27032 – Do not use the Output Seasonality Viewer if the Output stage has never been run. If you do, a "404 Not Found" error will result.

The Programs may provide links to Web sites and access to content, products, and services from third parties. Oracle is not responsible for the availability of, or any content provided on, third-party Web sites. You bear all risks associated with the use of such content. If you choose to purchase any products or services from a third party, the relationship is directly between you and the third party. Oracle is not responsible for: (a) the quality of third-party products or services; or (b) fulfilling any of the terms of the agreement with the third party, including delivery of products or services and warranty obligations related to purchased products or services. Oracle is not responsible for any loss or damage of any sort that you may incur from dealing with any third party.

Value-Added Reseller (VAR) Language

(i) the software component known as **ACUMATE** developed and licensed by Lucent Technologies Inc. of Murray Hill, New Jersey, to Oracle and imbedded in the Oracle Retail Predictive Application Server - Enterprise Engine, Oracle Retail Category Management, Oracle Retail Item Planning, Oracle Retail Merchandise Financial Planning, Oracle Retail Advanced Inventory Planning and Oracle Retail Demand Forecasting applications.

(ii) the **MicroStrategy** Components developed and licensed by MicroStrategy Services Corporation (MicroStrategy) of McLean, Virginia to Oracle and imbedded in the MicroStrategy for Oracle Retail Data Warehouse and MicroStrategy for Oracle Retail Planning & Optimization applications.

(iii) the **SeeBeyond** component developed and licensed by Sun Microsystems, Inc. (Sun) of Santa Clara, California, to Oracle and imbedded in the Oracle Retail Integration Bus application.

(iv) the **Wavelink** component developed and licensed by Wavelink Corporation (Wavelink) of Kirkland, Washington, to Oracle and imbedded in Oracle Retail Store Inventory Management.

(v) the software component known as **Crystal Enterprise Professional and/or Crystal Reports Professional** licensed by Business Objects Software Limited ("Business Objects") and imbedded in Oracle Retail Store Inventory Management.

(vi) the software component known as **Access Via™** licensed by Access Via of Seattle, Washington, and imbedded in Oracle Retail Signs and Oracle Retail Labels and Tags.

(vii) the software component known as **Adobe Flex™** licensed by Adobe Systems Incorporated of San Jose, California, and imbedded in Oracle Retail Promotion Planning & Optimization application.

(viii) the software component known as **Style Report™** developed and licensed by InetSoft Technology Corp. of Piscataway, New Jersey, to Oracle and imbedded in the Oracle Retail Value Chain Collaboration application.

(ix) the software component known as **WebLogic™** developed and licensed by BEA Systems, Inc. of San Jose, California, to Oracle and imbedded in the Oracle Retail Value Chain Collaboration application.

(x) the software component known as **DataBeacon™** developed and licensed by Cognos Incorporated of Ottawa, Ontario, Canada, to Oracle and imbedded in the Oracle Retail Value Chain Collaboration application.
