

Name get— gets the values of configurable or monitorable attributes

Synopsis get [--help] [--monitor[={true|false}]]
(dotted-attribute--name)+

Description The get subcommand uses dotted names to get the names and values of configurable or monitorable attributes for Enterprise Server elements.

You can use the `list(1)` subcommand to display the dotted names that represent individual server components and subsystems. For example, a dotted name might be `server.applications.web-module`. Attributes from the monitoring hierarchy are read-only, but configuration attributes can be modified using the `set(1)` subcommand. For more detailed information on dotted names, see the [dotted-names\(5ASC\)](#) help page.

Note – Characters that have special meaning to the shell or command interpreter, such as * (asterisk), should be quoted or escaped as appropriate to the shell, for example, by enclosing the argument in quotes. In multimode, quotes are needed only for arguments that include spaces, quotes, or backslash.

The following list shows common usage of the get subcommand with the * (asterisk):

get * or get *.*

Gets all values on all dotted name prefixes.

get domain* or get domain*.*

Gets all values on the dotted names that begin with domain.

get *config*.*.*

Gets all values on the dotted names that match *config*.*.*.

get domain.j2ee-applications.*.ejb-module.*.*

Gets all values on all EJB modules of all applications.

get *web-modules.*.*

Gets all values on all web modules whether in an application or standalone.

get *.*.*.*

Gets all values on all dotted names that have four parts.

Options --help

Displays the help text for the subcommand.

--monitor or --m

Defaults to false. If set to false, the configurable attribute values are returned. If set to true, the monitorable attribute values are returned.

Operands *dotted-attribute-name*

Identifies the attribute name in the dotted notation. At least one dotted name attribute is required. The dotted notation is the syntax used to access attributes of configurable entities.

Examples **EXAMPLE 1** Getting the Attributes of a Configurable Element

This example gets the attributes of `listener.http-listener-1`.

```
asadmin> get server.http-service.http-listener.http-listener-1.*  
server.http-service.http-listener.http-listener-1.acceptor-threads = 1  
server.http-service.http-listener.http-listener-1.address = 0.0.0.0  
server.http-service.http-listener.http-listener-1.blocking-enabled = false  
server.http-service.http-listener.http-listener-1.default-virtual-server = server  
server.http-service.http-listener.http-listener-1.enabled = true  
server.http-service.http-listener.http-listener-1.external-port =  
server.http-service.http-listener.http-listener-1.family = inet  
server.http-service.http-listener.http-listener-1.id = http-listener-1  
server.http-service.http-listener.http-listener-1.port = 8080  
server.http-service.http-listener.http-listener-1.redirect-port =  
server.http-service.http-listener.http-listener-1.security-enabled = false  
server.http-service.http-listener.http-listener-1.server-name =  
server.http-service.http-listener.http-listener-1.xpowered-by = true  
Command get executed successfully.
```

EXAMPLE 2 Getting Monitorable Objects

This example gets the monitorable objects and shows whether they are enabled (LOW or HIGH) or disabled (OFF). The `jvm` component is enabled for monitoring.

```
asadmin> get server.monitoring-service.module-monitoring-levels.*  
server.monitoring-service.module-monitoring-levels.connector-connection-pool=OFF  
server.monitoring-service.module-monitoring-levels.connector-service=OFF  
server.monitoring-service.module-monitoring-levels.d-trace=OFF  
server.monitoring-service.module-monitoring-levels.ejb-container=OFF  
server.monitoring-service.module-monitoring-levels.http-service=OFF  
server.monitoring-service.module-monitoring-levels.jdbc-connection-pool=OFF  
server.monitoring-service.module-monitoring-levels.jms-service=OFF  
server.monitoring-service.module-monitoring-levels.jvm=ON  
server.monitoring-service.module-monitoring-levels.orb=OFF  
server.monitoring-service.module-monitoring-levels.thread-pool=OFF  
server.monitoring-service.module-monitoring-levels.transaction-service=OFF  
server.monitoring-service.module-monitoring-levels.web-container=OFF  
Command get executed successfully.
```

EXAMPLE 3 Getting Attributes and Values for a Monitorable Object

This example gets all attributes and values the `jvm` monitorable object.

```
asadmin> get --monitor server.jvm.*  
server.jvm.HeapSize_Current = 45490176  
server.jvm.HeapSize_Description = Describes JvmHeapSize
```

EXAMPLE 3 Getting Attributes and Values for a Monitorable Object (Continued)

```
server.jvm.HeapSize_HighWaterMark = 45490176
server.jvm.HeapSize_LastSampleTime = 1063217002433
server.jvm.HeapSize_LowWaterMark = 0
server.jvm.HeapSize_LowerBound = 0
server.jvm.HeapSize_Name = JvmHeapSize
server.jvm.HeapSize_StartTime = 1063238840055
server.jvm.HeapSize_Unit = bytes
server.jvm.HeapSize_UpperBound = 531628032
server.jvm.UpTime_Count = 1063238840100
server.jvm.UpTime_Description = Describes JvmUpTime
server.jvm.UpTime_LastSampleTime = 1-63238840070
server.jvm.UpTime_Name = JvmUpTime
server.jvm.UpTime_StartTime = 1063217002430
server.jvm.UpTime_Unit = milliseconds
Command get executed successfully.
```

Exit Status	0	subcommand executed successfully
	1	error in executing the subcommand
