

Name delete-profiler– removes the profiler element

Synopsis delete-profiler
[--help]
[--target *target_name*]

Description The delete-profiler subcommand deletes the profiler element. A server instance is tied to the profiler by the profiler element in the Java configuration. After deleting the profiler and restarting the server, you can then create a new profiler.

This command is supported in remote mode only.

Options --help
Displays the help text for the subcommand.

--target
Do not specify this option. This option is retained for compatibility with other releases. If you specify this option, a syntax error does not occur. Instead, the subcommand runs successfully and the option is silently ignored.

Examples EXAMPLE 1 Deleting a Profile

This example deletes the profiler named sample_profiler.

```
asadmin> delete-profiler sample_profiler
Command delete-profiler executed successfully
```

Exit Status 0 subcommand executed successfully
1 error in executing the subcommand
