

**Name** flush-connection-pool– reinitializes the connections in the specified connection pool

**Synopsis** flush-connection-pool [--help] *pool\_name*

**Description** The flush-connection-pool subcommand resets a connection pool to its initial state for both JDBC connection pools and connector connection pools. Any existing connections are destroyed, which means that the transactions associated with these connections are lost and must be retired. Finally, the subcommand recreates the connections that are established for the pool, and restores the pool to its steady pool size.

This subcommand is supported in remote mode only.

**Options** --help  
-?

Displays the help text for the subcommand.

**Operands** *pool\_name*  
Name of the connection pool to be reinitialized.

**Examples** This example reinitializes the JDBC connection pool \_\_TimerPool.

```
asadmin> flush-connection-pool __TimerPool
Command flush-connection-pool executed successfully.
```

**Exit Status** 0 subcommand executed successfully  
1 error in executing the subcommand
