

Name stop-domain– stops the Domain Administration Server of the specified domain

Synopsis stop-domain [--help] [--domaindir *domain-dir*] [*domain-name*]

Description The stop-domain subcommand stops the Domain Administration Server (DAS) of the specified domain. If there are two or more domains in the domain directory, the *domain-name* operand must be specified.

This subcommand is supported in the local mode only.

Options --help

-?

Displays the help text for the subcommand.

--domaindir

Specifies the directory of the domain that is to be stopped. If specified, the path must be accessible in the file system. If not specified, the domain in the default *as-install/glassfish/domains* directory is stopped.

Operands *domain-name* The name of the domain you want to stop. Default is the name specified during installation, usually domain1.
