

# **Sun Java System Application Server 10 Quick Start Guide**

Sun Microsystems, Inc.  
4150 Network Circle  
Santa Clara, CA 95054  
U.S.A.

Part No: 820-4836-01  
April 2008

Copyright 2008 Sun Microsystems, Inc. 4150 Network Circle, Santa Clara, CA 95054 U.S.A. All rights reserved.

Sun Microsystems, Inc. has intellectual property rights relating to technology embodied in the product that is described in this document. In particular, and without limitation, these intellectual property rights may include one or more U.S. patents or pending patent applications in the U.S. and in other countries.

U.S. Government Rights – Commercial software. Government users are subject to the Sun Microsystems, Inc. standard license agreement and applicable provisions of the FAR and its supplements.

This distribution may include materials developed by third parties.

Parts of the product may be derived from Berkeley BSD systems, licensed from the University of California. UNIX is a registered trademark in the U.S. and other countries, exclusively licensed through X/Open Company, Ltd.

Sun, Sun Microsystems, the Sun logo, the Solaris logo, the Java Coffee Cup logo, docs.sun.com, Java, and Solaris are trademarks or registered trademarks of Sun Microsystems, Inc. in the U.S. and other countries. All SPARC trademarks are used under license and are trademarks or registered trademarks of SPARC International, Inc. in the U.S. and other countries. Products bearing SPARC trademarks are based upon an architecture developed by Sun Microsystems, Inc.

The OPEN LOOK and Sun<sup>TM</sup> Graphical User Interface was developed by Sun Microsystems, Inc. for its users and licensees. Sun acknowledges the pioneering efforts of Xerox in researching and developing the concept of visual or graphical user interfaces for the computer industry. Sun holds a non-exclusive license from Xerox to the Xerox Graphical User Interface, which license also covers Sun's licensees who implement OPEN LOOK GUIs and otherwise comply with Sun's written license agreements.

Products covered by and information contained in this publication are controlled by U.S. Export Control laws and may be subject to the export or import laws in other countries. Nuclear, missile, chemical or biological weapons or nuclear maritime end uses or end users, whether direct or indirect, are strictly prohibited. Export or reexport to countries subject to U.S. embargo or to entities identified on U.S. export exclusion lists, including, but not limited to, the denied persons and specially designated nationals lists is strictly prohibited.

DOCUMENTATION IS PROVIDED "AS IS" AND ALL EXPRESS OR IMPLIED CONDITIONS, REPRESENTATIONS AND WARRANTIES, INCLUDING ANY IMPLIED WARRANTY OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE OR NON-INFRINGEMENT, ARE DISCLAIMED, EXCEPT TO THE EXTENT THAT SUCH DISCLAIMERS ARE HELD TO BE LEGALLY INVALID.

Sun Microsystems, Inc. détient les droits de propriété intellectuelle relatifs à la technologie incorporée dans le produit qui est décrit dans ce document. En particulier, et ce sans limitation, ces droits de propriété intellectuelle peuvent inclure un ou plusieurs brevets américains ou des applications de brevet en attente aux États-Unis et dans d'autres pays.

Cette distribution peut comprendre des composants développés par des tierces personnes.

Certaines composants de ce produit peuvent être dérivées du logiciel Berkeley BSD, licenciés par l'Université de Californie. UNIX est une marque déposée aux Etats-Unis et dans d'autres pays; elle est licenciée exclusivement par X/Open Company, Ltd.

Sun, Sun Microsystems, le logo Sun, le logo Solaris, le logo Java Coffee Cup, docs.sun.com, Java et Solaris sont des marques de fabrique ou des marques déposées de Sun Microsystems, Inc. aux Etats-Unis et dans d'autres pays. Toutes les marques SPARC sont utilisées sous licence et sont des marques de fabrique ou des marques déposées de SPARC International, Inc. aux Etats-Unis et dans d'autres pays. Les produits portant les marques SPARC sont basés sur une architecture développée par Sun Microsystems, Inc.

L'interface d'utilisation graphique OPEN LOOK et Sun a été développée par Sun Microsystems, Inc. pour ses utilisateurs et licenciés. Sun reconnaît les efforts de pionniers de Xerox pour la recherche et le développement du concept des interfaces d'utilisation visuelle ou graphique pour l'industrie de l'informatique. Sun détient une licence non exclusive de Xerox sur l'interface d'utilisation graphique Xerox, cette licence couvrant également les licenciés de Sun qui mettent en place l'interface d'utilisation graphique OPEN LOOK et qui, en outre, se conforment aux licences écrites de Sun.

Les produits qui font l'objet de cette publication et les informations qu'il contient sont régis par la législation américaine en matière de contrôle des exportations et peuvent être soumis au droit d'autres pays dans le domaine des exportations et importations. Les utilisations finales, ou utilisateurs finaux, pour des armes nucléaires, des missiles, des armes chimiques ou biologiques ou pour le nucléaire maritime, directement ou indirectement, sont strictement interdites. Les exportations ou réexportations vers des pays sous embargo des Etats-Unis, ou vers des entités figurant sur les listes d'exclusion d'exportation américaines, y compris, mais de manière non exclusive, la liste de personnes qui font l'objet d'un ordre de ne pas participer, d'une façon directe ou indirecte, aux exportations des produits ou des services qui sont régis par la législation américaine en matière de contrôle des exportations et la liste de ressortissants spécifiquement désignés, sont rigoureusement interdites.

LA DOCUMENTATION EST FOURNIE "EN L'ETAT" ET TOUTES AUTRES CONDITIONS, DECLARATIONS ET GARANTIES EXPRESSES OU TACITES SONT FORMELLEMENT EXCLUES, DANS LA MESURE AUTORISEE PAR LA LOI APPLICABLE, Y COMPRIS NOTAMMENT TOUTE GARANTIE IMPLICITE RELATIVE A LA QUALITE MARCHANDE, A L'APTITUDE A UNE UTILISATION PARTICULIERE OU A L'ABSENCE DE CONTREFACON.

# Enterprise Server Overview

---

The *GlassFish Enterprise Server 10TP2 Quick Start Guide* provides basic instructions for quickly getting up and running with GlassFish Enterprise Server 10TP2 software. This guide provides basic instructions for the most common Enterprise Server tasks, including starting and configuring the Enterprise Server, deploying applications, getting started with using NetBeans<sup>TM</sup>, jRuby, and Eclipse technologies, and setting up load balancing and failover.

This chapter provides a basic introduction to GlassFish Enterprise Server core concepts, features, and components.

---

**Note** – This document does not provide comprehensive reference information or advanced procedures for working with GlassFish Enterprise Server. Refer to the other documents listed in on the [Enterprise Server Documentation Home Page](#) for more comprehensive information and instructions.

---

This chapter includes the following topics:

- “[Installing Enterprise Server Software](#)” on page 6
- “[Enterprise Server Core Concepts](#)” on page 6
- “[Enterprise Server Administration Tools](#)” on page 9
- “[How To Proceed](#)” on page 11

For information about conventions used in this document, see the [Documentation Conventions](#) page.

# Installing Enterprise Server Software

Install the GlassFish Enterprise Server software before continuing with this document. See the [Enterprise Server Installation Guide](#) for complete Enterprise Server installation instructions.

GlassFish Enterprise Server 10TP2 software is available from [Enterprise Server — V3 Technology Preview](#) page.

## Enterprise Server Core Concepts

The GlassFish Enterprise Server is an open source, plugin-based, Java EE 5 application server that provides enterprise class features like advanced administration and monitoring, clustering, high availability database (HADB) and load balancing support, and a bundled Java DB database engine.

- “Enterprise Server Features” on page 6
- “Enterprise Server Components” on page 8
- “Enterprise Server Update Center” on page 8
- “For More Information” on page 8

## Enterprise Server Features

Enterprise Server implements the newest features of the Java EE 5 platform, including JavaServer Pages (JSP) 2.1, JavaServer Faces (JSF) 1.2, Servlet 2.4, Enterprise JavaBeans 3.0, Java API for Web Services (JAX-WS) 2.0, Java Architecture for XML Binding (JAXB) 2.0, Web Services Metadata for the Java Platform 1.0, among others.

In addition to implementing the core Java 5 EE technologies, this 10TP2 release provides the following features:

### GlassFish Nucleus

- HK2
- Grizzly
- Logging
- Configuration
- Security

### Web Container

- Servlet 2.5
- JSP 2.1
- JSF 1.2
- jMaki 1.x

---

<b>Scripting</b>	<ul style="list-style-type: none"><li>■ PHP support</li><li>■ jRuby support</li></ul>

## Enterprise Server Components

For the purposes of this *Quick Start Guide* and your initial interactions with the Enterprise Server, there are six Enterprise Server components you will work with:

<b>Server Engine</b>	Framework in which Web domains are hosted, and Web applications and services are deployed, monitored, and maintained
<b>Database Engine</b>	Back-end data store used by Web applications and services
<b>Administration Console</b>	Browser-based tool for configuring, managing, deploying, and monitoring domains, database back end, Web applications, and Web services
<b>Command-line Interface (CLI)</b>	Command-line interface for configuring, managing, deploying, and monitoring domains, database back end, Web applications, and Web services
<b>Server Plugins</b>	Web applications, services, and scripting components plugged into the server framework
<b>Sample Applications</b>	Included with the Enterprise Server distribution to demonstrate deployment, management, and other server features.

## Enterprise Server Update Center

The GlassFish Enterprise Server Update Center is a convenient GUI-based for getting the latest versions of Enterprise Server and various plugins, extensions, and related applications. There is also a command-line interface for all Update Center functions.

The Update Center can be launched with the `asupgrade` command in the Enterprise Server *install-dir/bin* directory, or from the Enterprise Server administration console GUI.

## For More Information

The GlassFish Enterprise Server is an open source community project, so there are numerous sources of additional information available to you.

<b>Enterprise Server Project Page</b>	The <a href="#">GlassFish Enterprise Server Project</a> home page is your starting point for Enterprise Server downloads, documentation, wikis, and forums.
<b>Enterprise Server Documentation</b>	Complete Enterprise Server documentation is available on the <a href="#">Enterprise Server Documentation Home Page</a> .
<b>Enterprise Server Wiki</b>	The <a href="#">Enterprise Server wiki</a> is a community site that includes a wide range of topics related to Enterprise Server.

---

<b>Enterprise Server FAQs</b>	Several FAQs are available on the <a href="#">Enterprise Server FAQ</a> pages.
<b>Enterprise Server User Forums</b>	The <a href="#">Enterprise Server user forums</a> provide community support and tips for working with Enterprise Server.
<b>Enterprise Server Screencasts</b>	A rapidly growing collection of <a href="#">screencasts</a> demonstrate numerous features and examples for working with Enterprise Server and related projects.
<b>Java EE 5 Tutorial</b>	The <a href="#">Java EE 5 Tutorial</a> provides extensive instructions, examples, and sample code for working with all Java platform core technologies.

## Enterprise Server Administration Tools

GlassFish Enterprise Server provides three means for configuring, running, and managing the Enterprise Server:

- A Web browser-based administration console
- A set of command-line tools (see [Table 1–1](#)), the centerpiece of which is `asadmin`, which incorporates all features of the browser-based administration console
- Programmatic Java Management Extensions (JMX™) APIs

These tools connect to a special Enterprise Server instance called the *Domain Administration Server* (DAS). The DAS provides a single secure interface for validating and executing administrative commands regardless of which interface is used.

In the context of Enterprise Server configuration, a *domain* is a collection of configuration data, deployed applications, and machines with a designated administrator. The domain definition is encoded in a simple XML text file, and describes and can control the operation of several applications, standalone Enterprise Server instances and clusters, potentially spread over multiple machines. When the DAS is installed, a default domain called *domain1* is always installed.

**TABLE 1–1** Enterprise Server Command-Line Tools

Tool	Description
<code>appclient</code>	Launches the Application Client Container and invokes the client application packaged in the application Java archive (JAR) file
<code>asadmin</code>	Launches the Enterprise Server administration tool and provides a set of subcommands for configuring the Enterprise Server software
<code>asant</code>	Launches the Jakarta Ant tool, so that you can automate repetitive development and deployment tasks

**TABLE 1-1** Enterprise Server Command-Line Tools *(Continued)*

Tool	Description
asapt	Compiles Java sources with Java EE annotations; automatically invokes the <code>wsimport</code> command
asupgrade	Administration tool for upgrading the Enterprise Server software
capture-schema	Extracts schema information from a database and produces a schema file that the server can use for Container Managed Persistence (CMP)
jspc	Compiles JSP pages
package-appclient	Packages the application client container libraries and JAR files
schemagen	Creates a schema file for each namespace referenced in your Java classes
verifier	Validates the Java EE deployment descriptors with the DTDs; also provides a graphical user interface when used with the <code>-u</code> option  <b>Note:</b> Some Microsoft Windows systems launch a driver verifier utility with the same name. To launch the Enterprise Server verifier, you must be in the <code>install-dir/bin</code> directory.
wscompile	Generates client stubs or server-side skeletons for JAX-RPC from associated service definition interfaces; generates a Web Services Description Language (WSDL) description for the associated interface
wsdeploy	Generates an implementation-specific, ready-to-deploy WAR file for Web services applications that use JAX-RPC
wsgen	Reads a Web service endpoint class and generates all the required artifacts for Web service deployment and invocation
wsimport	Generates JAX-WS portable artifacts, such as service endpoint interfaces (SEIs), services, exception classes mapped from the <code>wsdl:fault</code> and <code>soap:headerfault</code> tags, asynchronous response beans derived from the <code>wsdl:message</code> tag, and JAXB generated value types
xjc	Transforms, or binds, a source XML schema to a set of JAXB content classes in the Java programming language

**Note –**

- To run these command-line tools on Windows, ensure that your system PATH points to the Enterprise Server `install-dir/bin/` directory.
- You can run the `asadmin` subcommands by prefixing `asadmin` with every subcommand or by entering the `asadmin` shell environment (type `asadmin` and press Return) in the Enterprise Server `install-dir/bin/` directory.

## How To Proceed

After completing the basic procedures explained in this document, there are several topics in particular you may want to learn about next.

**Configuring Clusters**     \*\*\*[Link TBD]

**Deploying Applications**     \*\*\*[Link TBD]

**Configuring HADB**     \*\*\*[Link TBD]

**Configuring Load Balancers**     \*\*\*[Link TBD]

**Configuring Monitoring**     \*\*\*[Link TBD]

## Using Enterprise Server Software

---

This chapter explains how to get started with a basic set of Enterprise Server tasks. The following topics are included in this chapter:

- “Starting and Stopping the Default Domain” on page 13
- “Starting and Stopping the Bundled Java DB Server” on page 14
- “Using the Administration Console GUI” on page 15
- “Deploying and Undeploying Applications” on page 16

---

**Note** – The instructions in this chapter use UNIX/Linux-standard forward slashes (/) for directory path separators in commands and file names. If you are running Enterprise Server on a Microsoft Windows system, be sure to use backslashes (\) instead; for example:

**UNIX/Linux**      *install-dir/bin/asadmin*

**Windows**      *install-dir\bin\asadmin*

---

## Starting and Stopping the Default Domain

By default, when you install Enterprise Server, a default domain named `domain1` is created.

### ▼ To Start the Default Domain

**Before You Begin**    Make sure that you have installed [Java JDK 6 Update 5](#) on the system on which Enterprise Server is installed, and that the JDK `bin` directory is in your system PATH. See the [Enterprise Server Installation Guide](#) for Enterprise Server 10TP2 installation instructions.

- Run the **startserv** script.

*install-dir/bin/startserv*

- Alternatively, you can use the **asadmin** command:

*install-dir/bin/asadmin start-domain domain1*

Either of these commands starts the default domain, `domain1`.

## ▼ To Stop the Default Domain

- Run the **stopserv** script.

*install-dir/bin/stopserv*

- Alternatively, you can use the **asadmin** command:

*install-dir/bin/asadmin stop-domain domain1*

Either of these commands stops the default domain, `domain1`.

# Starting and Stopping the Bundled Java DB Server

Enterprise Server is bundled by default with a Java DB server implementation, although you can use any JDBC-compliant database engine. The database is not started by default when you start Enterprise Server, so if you have applications need a database backend, you need to start the database server manually.

## ▼ To Start the Java DB Server

The instructions in this procedure describe how to start the Java DB server that is bundled with Enterprise Server, but they apply for the most part to any database you want to use.

---

**Note** – At least one Enterprise Server domain must be started *before* starting the database server.

---

- Use the **asadmin start-database** command.

The general form for the command is:

*install-dir/bin/asadmin start-database --dbhome directory\_path*

By default, for the Java DB bundled with Enterprise Server:

*install-dir/bin/asadmin start-database --dbhome install-dir/glassfish/javadb*

## ▼ To Stop the Java DB Server

- Use the `asadmin stop-database` command.

The general form for the command is:

`install-dir/bin/asadmin start-database`

For the Java DB bundled with Enterprise Server:

`install-dir/bin/asadmin stop-database`

# Using the Administration Console GUI

The Enterprise Server administration console GUI (hereafter referred to as the *admin console*) provides a graphical, browser-based means for configuring, maintaining, and monitoring the Enterprise Server and your domains.

---

**Note** – In the Enterprise Server 10TP2 release, the admin console is not installed by default, but is instead installed when you invoke it for the first time after installing Enterprise Server.

---

## ▼ To Launch the Admin Console

**Before You Begin** Make sure at least one Enterprise Server domain is started, as described in “[To Start the Default Domain](#)” on page 13.

- 1 Open the **admin console URL in a browser window**.

The default URL for the admin console is:

`http://localhost:4848/admin`

You are prompted to install the admin console.

- 2 Enter a proxy host and proxy port, if necessary, and then click **OK** to start the installation.

- 3 When the installation is complete, refresh the browser page to launch the admin console.

- 4 Log in to the console.

By default the user name is `admin` and the password is `adminadmin`. It is recommended that you change this as soon as possible. To change the default password:

- a. \*\*\*[TBD]

- 5 Refer to the \*\*\*[Link TBD] and to the online help for instructions on using the admin console.

# Deploying and Undeploying Applications

Enterprise Server 10TP2 includes several sample applications that you can use to familiarize yourself with how Enterprise Server works.

There are \*\*\*[TBD] sample applications included with Enterprise Server:

- \*\*\*[TBD]
- \*\*\*[TBD]

The process of configuring and enabling an application to run within the Enterprise Server framework is referred to as *deployment*. You can deploy applications in three ways:

- From the command line with the `asadmin deploy` command
- From the admin console
- By placing the application in the `install-dir/domains/domain_name/autodeploy` directory

Applications can be packaged for deployment in three different formats:

- Web ARchive (WAR)
- Java ARchive (JAR)
- Enterprise ARchive (EAR)

The remainder of this chapter explains how to deploy, list, and undeploy applications.

- “To Deploy the \*\*\*[TBD] Application From the Command Line” on page 16
- “To List Deployed Applications From the Command Line” on page 17
- “To Undeploy the \*\*\*[TBD] Application From the Command Line” on page 17
- “To Deploy the \*\*\*[TBD] Application From the Admin Console” on page 17
- “To View Deployed Applications in the Admin Console” on page 17
- “To Undeploy the \*\*\*[TBD] Application From the Admin Console” on page 17
- “To Deploy an Application Using Autodeploy” on page 17
- “To Undeploy an Autodeployed Application” on page 18

## ▼ To Deploy the \*\*\*[TBD] Application From the Command Line

- Use the `asadmin deploy` command.

The general form for the command is:

`install-dir/bin/asadmin deploy app_name`

To deploy the \*\*\*[TBD] application, the command is:

`install-dir/bin/asadmin deploy ***[TBD]`

## ▼ To List Deployed Applications From the Command Line

- Use the `asadmin list-applications` command:

*install-dir/bin/asadmin list-applications*

## ▼ To Undeploy the \*\*\*[TBD] Application From the Command Line

- Use the `asadmin undeploy` command.

The general form for the command is:

*install-dir/bin/asadmin undeploy --name app\_name*

## ▼ To Deploy the \*\*\*[TBD] Application From the Admin Console

- \*\*\*[TBD]

## ▼ To View Deployed Applications in the Admin Console

- \*\*\*[TBD]

## ▼ To Undeploy the \*\*\*[TBD] Application From the Admin Console

- \*\*\*[TBD]

## ▼ To Deploy an Application Using Autodeploy

- Copy the application JAR, WAR, or EAR to the *install-dir/domains/domain\_name/autodeploy* directory.

The application is automatically discovered and started by Enterprise Server.

## ▼ To Undeploy an Autodeployed Application

- Delete the application from the domain's autodeploy directory.

## Configuring Container Technologies

---

In addition to Web applications packaged in JAR, WAR, and EAR formats, Enterprise Server can be configured to work with NetBeans, jRuby, and Eclipse technologies. This chapter provides a brief introduction to configuring each of these technologies to work with Enterprise Server.

- “Working With NetBeans” on page 19
- “Working With jRuby” on page 19
- “Working With Eclipse” on page 19

### Working With NetBeans
