

AGILE E6.0.1

RELEASE NOTES

December 2, 2005

Agile e6.01 represents a service release rolling up a large number of bug fixes and including enhanced features like ViewCafé etc.

For a list of fixed bugs check the Agile Support page on our website at <http://eignersupport.agilesoft.com/index.asp> (you will need a password to enter the support website).

ViewCafé Integration

Part of the Product Visualization solution in Agile e6 is the integration with Spicer ViewCafé and the provision of the ViewCafé Server as part of the PDM License. Prior to Agile e6.0.1, the ViewCafé integration was an add-on.

With Agile e6.0.1, the integration to ViewCafé 3.3 is now built into the standard installation. This includes the ViewCafé client inside the Agile e6.0.1 Web Presentation Server and changes in the data model inside Agile e6.0.1.

The ViewCafé Server is provided separately on the installation media and can be installed on demand.

New Workflow Defaults

A new parameter is available for "switching off" the permission manager cache.

Parameter: prmCache

"false" – Cache is switched off

Installation

The installation contains functionality to upgrade existing Agile e6.0 environments to 6.01

- Binary upgrade for all created environments
- Dump upgrade for selected environments

For detail information see patch upgrade manual.
