AGILE E6.0.4
RELEASE NOTES

August 8, 2007

Agile e6.0.4 represents a service release rolling up a large number of bug fixes.

Contents

JBOSS

JBoss is no longer included in the installation package for Agile e6.0.4. If you are using Business Services for the Agile e6 Server, you need to download the JBoss manually. For further information on installing the JBoss refer to the Agile e6.0.4 installation manuals.

Note - During the installation of the Agile Server, the axalantORIGIN environment will be created automatically. Since the Business Service can only be activated while creating a new environment, it is not possible to activate the Business Service of the axalantORIGIN environment afterwards, **even** after installing the JBoss Application Server.

FELICS Removal

The FELICS License Server has been removed. All contractual terms for using Agile PLM Solutions stay in place.

Password Encryption Algorithm

The password encryption algorithm has been replaced and customers upgrading to Agile e6.0.4 have to re-set all existing user passwords manually due to some restrictions. Otherwise, after the upgrade to Agile e6.0.4 no login will be possible.

Any existing password that has a character not matching the following character set at the **first and second position** (e.g. German umlauts) need to be changed before upgrading to Agile e6.0.4, otherwise, the user might not be able to log-in again.

❑ A-Z

❑ a-z

❑ 0-9

❑ /

❑ .

Note – The check of the passwords cannot be automated as they are stored encrypted.

The new password will then be encrypted with a new algorithm and can then have any characters the user wants to use. The length of a password is also no longer limited to a certain amount of characters.

Renamed Tabs in Item Mask

The tabs Work Request and Work Order of the Item mask have been renamed to Affecting EWR and Affecting EWO, as both refer to the Affected Objects tab of the Work Request and Work Order mask.

Java Client – Kunststoff Look&Feel

This option has been removed.

Platform Support

For a complete list of supported platforms please refer to:
http://eignersupport.agilesoft.com/documentation/plm_platforms.asp

List of Fixed Bugs for Agile e6.0.4

This list contains all open issues which are confirmed to be solved as part of the Agile e6.0.4 Release.

FIS ID	Module	Description
8168	OTH	The titles of all document masks should be corrected into the correct capital letters. - Main words: Capital letters - Prepositions: Small letters Beside this, the titles of the - Office Suite documents should be changed from "Documents" into "Office Documents". Reproduction: 1) Start > Documents > {respective document menu items}

FIS ID	Module	Description
		Environment: - axa2000EIP_test
9175	WEB	In the query mode the Web client has to take the size of the current field into account. The maximum number of characters to enter in the query mode is the field size. Example: width of field: 4. The following query condition should be inserted: >1800 & <2000.
9290	QRY	If in a list mask a query value is inserted which is longer than 100 characters (Default QUERYSIZE has e.g. a value of 250).This query cannot be stored completely with "favorites -> save search conditions" as the field T_QRY_CND.QRY_VALUE has a size of only 100 characters!
10046	OTH	Drag'n Drop of an item from the browser to the element list of a project (in the browser) does not work.
10120	DTV	Try to change the password with Tools->Change Password. If the new password is an empty password you will get a database error message: "Internal Database Error in "dbi_wri_usr_pwd" (EPSQL "EPQUPD") Code -966".
10231	BOM	When displaying item structures (version view dependent) following error occurs: Set version view to development, create two items and insert item 2 into the BOM of item 1. Now change the status of item 2 (child of item 1) to 240 (In Change) and copy it to a new revision (with all structure elements) -> the new revision of item2 is inserted into the structure of item 1 (correct). However, in the BOM of item 1 BOTH revisions of item 2 are visible although development view is set and so the old revision which does not have a current flag (T_MASTER_DAT.CUR_FLAG) set should be hidden. Hints: In the multilevel structure explosion only the current revision is shown! With 2D documents for example everything is correct: In development view only the current revision is displayed. If the current flag of the BOM (T_MASTER_STR.CUR_FLAG) is taken away from the item structure mask the old revision is not displayed any more.
10247	DTV	Since Agile e6, the portmapper writes useless messages in eventlog e.g. every 30 min.

FIS ID	Module	Description
10425	DFM	If DFM is activated, it's only possible to delete a file if the fms_cli can reach every fileserver where this file is stored, so it's not possible to replace a file if one of the servers, where the old version is stored, is not reachable. Also it's not possible to create a network where one branch office doesn't know the other ones.
10470	OFS	The reservation/unset reservation for office documents is not working correctly: reserve a document and open it with Word, save it to PLM and close Word. If you try now to unset the reservation, the error message:"10000002 is currently not reserved, no need to reset reservation" is displayed. It seems like you can unset a reservation if you repeat "unset reservation" a second time.
10514	WEB	If a user updates his/her password and inserts wrong values, there is no message in the message window (example: old password was inserted wrongly; new password confirmation different).
10556	OTH	Choosing "Clear Entry" from the context menu of a selection widget (drop down menu of type "W") leads to errors if the mask limit of the selection widget was reached.
10944	OTH	The master password also includes the password for PDW. However, the E6-EVL password must NOT include the E6-MPA license.
10980	GTM	In a mask that is opened with xgroup_lis the userexit wdh_wri_lis cannot be executed anymore (this was possible in Agile e5.1).
11047	WFL	Symptom: When creating a workflow process in definition from a template, the priority is always set to "B" in field (T_PRC_DAT.PRC_PRIORITY). The mask-default "C" is not used.
11067	OTH	In the form "Document Management Lookup Values" (System->Document Management->Lookup Values) the sublists are assigned to the wrong folders. The list document attributes can be found in the folder "Drawing Frames" and vise versa.
11080	JCL	1. Start Java client with yeti_i18n_test application 2. Open "Default Data" 3. Create and store a new record with variable name 'TEST', type 'S' and value 'test' 4. Edit this record, write (or copy) some Cyrillic letters to the value field 5. Leave the field with the tab key

FIS ID	Module	Description
		An error message is displayed: "Could not convert data…" and the cursor stays in the field. 6. Press the tab key once again and the cursor leaves the field without error message.
11081	JCL	Search for a document in the doc - list => select the document and switch to the form =>ok. Now search for another document in the form (e.g. for Document-No. %). The query shows the previous document (if using %) or no document is found.
11108	GTM	In the attribute tab of the combined class form is a button with the German text "Setattributen Einfügen" (since Agile e6). This text can be misunderstood and therefore should be changed into "Attributgruppe einfügen".
11109	PAC	Warning Message: "Value of configuration parameter "EDB-PAC-RECURSION" is set to "-"! This might cause errors." The default value for EDB-PAC-RECURSIONS needs to be changed in the dump from a value of '-' to a value of '50'.
11117	GTM	- Create a class with at least 2 attributes, one of type "string" (example: S5) - Create attribute values for the string attribute (at least 2) 1. Attribute field has to be emptied first. 2. Update classification list (items, table T_GRP_ART) 3. Click into the attribute field and select a value from the drop down menu (value is taken over into the field) 4. Click the button again for the dropdown menu and select a different value (simulation: user misses the correct value at the first time) 5. Without any further clicks store the record. 6. Refresh the classification list -> The selected value is not stored in the database!
11123	OTH	The selection texts of the menu EDB-DOC-RES-SLSB are not translated into German. Therefore, the menu for a reserved document in the explorer window appears only in English language.
11130	DBS	In the standard dump for Agile e6.0.3 a bitmap index still exists. The upgrade tool 3.1.13 also creates this index with script: ora/sql/cre_rep_edb.sql CREATE BITMAP INDEX EDB_CHG_OPR6 ON T_CHG_OPR_DAT(EDB_IS_SPECIFIED) TABLESPACE &&2;

FIS ID	Module	Description
11135	UPG	The patch upgrade from Agile e6.0.2 to Agile e6.0.3 with SQL Server is executed only incompletely, because a component is missing. Therefore, the quick load function does not work any more afterwards. When upgrading from Agile e5.1 everything works fine.
11136	GTM	Symptom: The attribute values of an attribute, which is inherited by an upper class, are not present within the subclass after upgrading Agile e5.1.1 to Agile e6.0.3.
11143	OTH	The selection text of the selection "EDB-DMS-UPD" is "Update", but it's missing the bitmap with the standard update function "EDB-BAS-UPD", where the text is "#update:Update". This should be adapted in the standard dump.
11174	OFS	If there is an Excel 2000 with the Autosave option already started when I try to checkout and open another Excel file, then in the new opened Excel session the following message is shown: AUTOSAVE.XLA is already open.
11185	OFS	If a file is checked-in via the OfficeSuite, an OfficeSuite file type record is also created (if not already there).
11192	OTH	The constraint EDB-CHG-SET-EFF-REC is not correctly defined in the standard dump of Agile e6.0 to e6.0.3. The key field 2 is T_WRK_EFF_DAT.EDB_EFF_TYPE but should be T_WRK_EFF_DAT.EDB_WRK_SET_REF.
11208	OTH	The standard dump includes three lifecycle definitions (STD-EWO, STD-POP, and STD-PPL) containing a status transition where the access rights are defined as empty (=no access).
11210	MOA	In the job selection widget, which pops up directly after start up for non-manager users, when Multi-Project Access Rights are switched on, the selection values for the radio button field are translated incorrectly into German. "Alle zugewiesenen Projekte" should be "Alle zugewiesenen Jobs" and "Anzuzeigende Projekte" should be "Jobs mit aktuell anzuzeigenden Projekten".
11228	OTH	After deactivating the STEP Feature (View->Available Features->Remove the ckeck for "Extensions for STEP AP214"), the STEP related tabs still show up on the Item Navigator form.
11247	OTH	In the reservation menu (EDB-RES-MEN) in Agile e6.x the manager function for unreserving documents (Selection EDB-RES-RST-MNG) is missing. The selection

FIS ID	Module	Description
		itself is still available in the dump but not assigned to any menu anymore.
11259	ECI	It is not possible to fill a blob field (f.ex. T_DOC_DAT.DOC_BLOB) with eci_upd_typ (internally uses eci_add_blb_fil). But the system returns "OK" and no error message appears. Using eci_upd_ent a blob field can be filled correctly without any error.
